FRENCH DISTRIBUTION RIGHTS GRANTED FOR LEADING CANADIAN AGRICULTURAL TECHNOLOGY

NORAC Systems International recently introduced the **UC4+™ Spray Height Control System** to the French market in partnership with France-based distributor, ECOFITO Sarl.

Over the last 12 years, NORAC has seen excellent results with the **UC4+™** system in North America and in the last three years made the decision to offer its products to key markets internationally. The system made its debut over the last few months in France with the support of ECOFITO Sarl. Mr. Bertrand Plessis, Director of ECOFITO Sarl, has over 20 years of experience in the spraying industry and is excited to be part of introducing this product line to the French market.

According to Danae Armstrong, NORAC's Manager of International Markets, "the high level of interest from farmers in our product and their eagerness to adopt new technology were both determining factors in our decision to enter the French market."

With the **NORAC UC4+™ Spray Height Control System**, sprayer booms automatically follow the contours of the land. The system controls the main lift, slant cylinder, and each wing to keep all boom sections at the required height automatically. Systems are available to suit both rigid and variable geometry style booms.

NORAC's customers have indicated that the **UC4+™ Spray Height Controller** is the best option on their sprayer because of its ability to help the operator achieve optimum spray pattern, even dispersion of chemicals and reduction of drift.

The **UC4+™ Spray Height Controller** relieves the operator from the stress of monitoring field contours and making constant boom height adjustments. No longer having to move his head from side to side for many hours means the system frees the operator from the most stressful part of the job. This also allows the operator to increase travel speeds and extend application time well into the night to take advantage of low wind conditions.

NORAC Systems International is based in Canada and employs 70 full time staff. With over 30 years of experience in ultrasonic technology, the company offers the world's most advanced height control products.
