

Unprecedented Spray Height Accuracy.

Sprayer:	Berthoud Boxer II 3000R 28m
Featured Sprayer:	NORAC UC4™ Spray Height Controller

“There is an optimal height for maximum deposition of spray; with our NORAC controller we can hit this optimum every time.”

Greg Bliss farms near Stilton, Peterborough, UK and is the owner of a Berthoud Boxer II 3000R. The variable geometry booms on this self propelled sprayer are 28m wide. Greg recently installed one of NORAC’s standard UC4 Spray Height Control systems.

According to Mr. Bliss, *“Different nozzles all produce different spray patterns. There is an optimal height for maximum deposition of spray; with our NORAC controller we can hit this optimum every time. This reduces drift and gives us the maximum return for all our applications, saving money and easing the job for the operator.”*
