

Unprecedented Spray Height Accuracy.

NORAC  Customer Profile

Sprayer:	Bateman RB25 3000L 36m
Featured Sprayer:	NORAC UC4™ Spray Height Controller

“The system makes a world of difference for my sprayer operator.”

Tony Parr, a farmer near Lakenheath, Suffolk, UK, is the owner of a Bateman RB25 3000L. This self propelled sprayer has a 36m boom width with independent wing control. Tony was the first Bateman customer to test one of NORAC's UC4™ Spray Height Control systems and is very pleased with his decision.

According to Mr. Parr, *“The system makes a world of difference for my sprayer operator and basically relieves him from the stress of constant boom adjustments. A 36m boom can be difficult to control, especially in hilly terrain. We find that with the NORAC system we can spray faster and the system gives us the confidence that we are always spraying at the right height”.*
